

Anti-Bla g 2 [4C3] Standard Size Ab00651-13.12

This chimeric human antibody was made using the variable domain sequences of the original Mouse IgG1 format, for improved compatibility with existing reagents, assays and techniques.

Isotype and Format: Human IgG4-S228P, Kappa

Clone Number: 4C3

Alternative Name(s) of Target: Cockroach Allergen; Aspartic protease Bla g 2; Blattella germanica allergen

UniProt Accession Number of Target Protein: P54958

Published Application(s): crystallization, ELISA

Published Species Reactivity: German Cockroach (B. germanica)

Immunogen: Bla g 2, a major cockroach allergen.

Specificity: This antibody binds to the C-terminal lobe of Bla G 2, via an epitope containing a carbohydrate moiety (on Asn268, however non-essential for binding, though a 40-fold reduction in affinity is observed).

Application Notes: This antibody binds to Bla g 2 via an epitope distinct from the epitope used by anti-Bla g 2 antibody clone 7C11 also available through Absolute Antibody. Both antibodies may be used in a sandwich ELISA.

Antibody First Published in: Li et al. Carbohydrates contribute to the interactions between cockroach allergen Bla g 2 and a monoclonal antibody J Immunol. 2011 Jan 1; 186(1): 333–340. [PMID:21123808](#)

Note on publication: Describes the generation and use of this antibody in a co-crystallization study as well as in a sandwich ELISA with clone 7C11

Product Form

Size: 100 µg Purified antibody.

Purification: Protein A affinity purified

Supplied In: PBS with 0.02% Proclin 300.

Storage Recommendation: Store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C.

Concentration: 1 mg/ml.

Important note – This product is for research use only. It is not intended for use in therapeutic or diagnostic procedures for humans or animals.
